Designed for Smarter Dental Solutions

New Australian Standards 23907:2023

Indicates Australia's updated benchmark for sharps container safety.

- Higher performance requirements
- Stricter testing protocols and Sharp Injury Prevention
- Focus on containment integrity and user protection

Why It Matters?

Ensuring safer workflows to minimise the risk of needstick injuries.

How Sharpsafe® Complies

- 🔒 Temporary & Permanent closure
- 🛡️ Puncture resistance - tested to australia standards of 2N
- 👉 Single hand operation - Reduce risk of accidental exposure
- ♻️ Sustainable - 94% reduction in carbon footprint compared to virgin plastics
- 📦 Nestable design - reduce storage and transport costs

PREMIUM QUALITY

TRIPLE HEAT-SEALED

EXCELLENT VALUE

Vantage One Premium SMMS Sterilisation Wrap

New & Improved Design!
Same Value, Better Quality

The Vantage One Premium Sterilization Wrap is made of a strong 4-ply SMMS non-woven fabric providing excellence in strength, barrier & low-lint performance.

- Premium 60gsm High Density SMMS 4 Layers Sterilization Wrap
- SMMS wraps are a multi-layer, non-woven, soft and drapable blend of spunbond, meltblown material.
- Lint free and help to protect wrapped contents from contamination.
- Featuring 4 layers, they offer a higher level protection against fluid and particles than the basic SMS wrap.
- Provides exceptional air permeability, a very low shrinkage rate, strong resistance to tears and punctures and are easy to fold and work with.
- SMMS wraps have four layers, two spun-bound and two melt-blown layers that make for a very strong yet flexible CSR wrap. The extra melt-blown layer consist of microfibers that ensure greater bacteria barrier
- Tear, Flame, lint and abrasion resistant

JustStop Hemostatic Dressing

BEST SELLER

- ✓ 1.9cm x 1.9cm
- ✓ On contact with blood or exudate, JustStop becomes a viscous gel which wound voids, seals capillary ends, and activates the clotting system.
- ✓ pH neutral, bacteriostatic, non-irritating and non-cytotoxic
- ✓ On application, the gauze becomes gel-forming oxygen barrier over the wound or extraction site thereby helping to relieve pain and help clotting to stop bleeding.
- ✓ Once settled, the dressings can then be removed painlessly and without interruption to the wound site.
- ✓ Suitable for extraction sites, dental trauma, biopsy sites, periodontal surgery, and oral surgery.

Stainless Steel Primary Molar Crowns

- ✓ Pre-Contoured Design - Pre-contoured to help save chair time and save on productivity.
- ✓ Transparent Ceramic Coating - Ceramic coating has been utilised to minimise the risk of nickel allergy whilst enhancing aesthetics by reducing the gloss of stainless alloy.
- ✓ Upper D's Improved Design - Designed to feature a shorter mesiodistal width offering a distinct fit and enhanced comfort.
- ✓ Accurate Occlusal Anatomy - Provides a more comfortable and efficient chewing experience.
- ✓ Soft Lateral Edges - Provides easy trimming and crimping for simple shaping.
- ✓ Strong Yet Flexible Occlusal Surface - Designed to balance softness & strength and prevent occlusal perforation.

Stainless Steel Kids Ring Crowns

Our Kids Ring Crowns features an additional ring for extra stability, ensuring a secure fit. designed with a special ring for threading dental floss, reducing the risk of accidental swallowing during procedures, particularly for children with disabilities.

- ✓ **Enhanced Stability** - You can experience enhanced stability with a ring on the side of the crown while retaining all the advantages of our Kids Crowns.
- ✓ **Easy Removal** - The ring is designed for easy removal with pliers or even by hand. No need to polish, no need to worry about roughness.
- ✓ **User-Friendly, Patient-Friendly** - Users can simply thread dental floss through the ring. This ring significantly reduces the risk of accidental swallowing during procedures.

Itena Provitemp Temporary Cement

ProviTemp from Itena is a eugenol free fluoride releasing automix temporary cement with excellent retention and easy excess removal.

BEST SELLER

- ✓ Ideal for temporary cementation (2-4 weeks) of: crowns & bridges, inlays & onlays, splints & temporary trials of permanent restorations
- ✓ Radiopaque
- ✓ Automix Syringe Pack includes 1 x 8g syringe + 10 mixing tips

Pack
ITE-PTEMPX
\$75.90

Itena Total C-Ram Permanent Crown Cement

- ✓ Especially formulated for the cementation of ceramic crowns: Formulated with a primer for ceramic and porcelain, **it can provide the cementation of all metal crowns with the additional capability in cementing ceramic, zirconia and porcelain**
- ✓ Time Saving - No etching, Primer, bonding or curing. Total C-Ram is an all in one (Etching + Primer + Bonding + Cement)
- ✓ Extremely Thin Film Thickness (10um)
- ✓ Time Saving cementing ceramics: No need for additives primers for cementing any ceramics
- ✓ Radiopaque
- ✓ Automix Syringe Pack includes 1 x 8g syringe + 10 mixing tips + 10 fine intra oral tips + 10 x-fine intra oral tips.

All In One Solution

Etching + Primer + Bonding + Cement

Itena Iperbond MAX Universal Adhesive

- ✓ Only 10 seconds of curing time!
- ✓ Universal Adhesive: etching, primer and adhesive resin in a single product.
- ✓ Optimal viscosity and thixotropy: adhesion via a homogenous layer without excesses
- ✓ Material stable over time: does not require storage in a refrigerator.

Itena Dentotemp Implant & Temporary Crown Cement

- ✓ Ideal for the implants & temporary crowns: secure retention and retrievability for implant retained crowns.
- ✓ High bonding strength with easy removal
- ✓ Rebasing and cementation in one stage!
- ✓ Radiopaque
- ✓ Eugenol free - No interference with permanent cements
- ✓ Can also be used as a temporary cement for temp crowns for 6+ weeks

Product	Code	PRICE
Automix Syringe Pack 1 x 6g syringe + 20 mixing tips	ITE-DTEM1-X	\$69.00
Automix Bulk Syringe Pack 2 x 6g syringes + 20 mixing tips	ITE-DTEM2-X	\$129.95

Itena Totalcem Self-Etching and Self-Adhesive Permanent Cement

- ✓ Ideal for the permanent cementation of: metal crowns, bridges, posts & inlays / onlays.
- ✓ Can also be used for the cementation of ceramic / porcelain, however bonding can be enhanced with the addition of C-Ram Booster.
- ✓ Self-Etching & Self-Adhesive
- ✓ Automix Syringe Pack includes 1 x 8g syringe + 10 mixing tips + 10 fine intra oral tips + 10 x-fine intra oral tips.

Reflectys & Reflectys Flow

Universal composite for anterior and posterior restorations

BEST SELLER

Key Points

- ✓ Nano Hybrid, light cured composite material which can be used for anterior and posterior restorations.
- ✓ Low polymerisation shrinkage: better marginal adaption
- ✓ Easy handling of material
- ✓ Contains fluoride
- ✓ Radiopacity equivalent to 220% of aluminium
- ✓ Full range of shades available

How to select the right matrix thickness & hardness

- 0.035mm thickness are more effective for restoration of small caries.
- 0.05mm thickness are intended for restoration of large caries in the subgingival area. Such matrices retain the shape well.
- Hard matrices are easy to install whereas soft matrices are easily adapted for contact point formation

Dentoclic

Fiberglass Posts

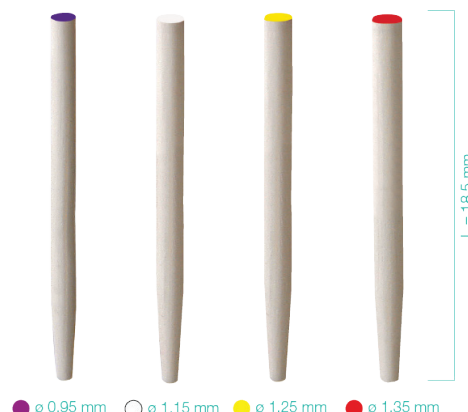

Dentoclic glass-fiber posts are made of 80% unidirectional parallel oriented glass fiber embedded in 20% epoxy-resin. This type of post enables minimally invasive direct restorations. Excellent mechanical properties for a reduced risk of fracture.

Indications

- ✓ Prosthetic reconstruction with highly aesthetic results.
- ✓ Reconstruction preserving the maximum possible amount of dentin.
- ✓ Direct corono-radicular reconstruction with glass fiber.

Advantages

- ✓ Excellent resistance to flexion (836Mpa) thanks to its many longitudinal glass-fibers.
- ✓ Elastic behavior similar to dentin.
- ✓ Highly translucent posts with excellent distribution of light.
- ✓ Allows polymerization of the core build-up material on all of the post surface.
- ✓ High radiopacity (232% Al).
- ✓ Biocompatible.
- ✓ No risk of corrosion or coloration.

Introductory Kits

Contents:

6 x Purple posts 0.95mm / L 18.5mm

TePe® Interdental Brush Original **BEST SELLER**

Effective plaque removal prevents gum inflammation, cavities and bad breath. Interdental brushes are the most effective way to remove plaque between the teeth. The wire is plastic coated for safe and gentle cleaning around natural teeth and implants. The user-friendly handle offers a stable grip which enables cleaning with controlled movements.

The smaller brush sizes (0-3) have a flexible neck for increased durability and access. The larger brush sizes (4-8) have a thicker, bendable wire.

Oracoat XyliMelts for Dry Mouth

BEST SELLER

- ✓ Oracoat XyliMelts are fully dissolving oral adhering discs whose active ingredients, Xylitol and cellulose gum, are slowly released into the mouth.
- ✓ They provide hours of discreet relief as the ingredients coat, moisturize, lubricate, sooth and stimulate saliva flow.
- ✓ XyliMelts adhere strongly to teeth and gums, so they can be safely used while sleeping, when dry mouth is the worst.
- ✓ Can be used while eating or drinking.

PERFIT

The Hydrophilic Precision
impression materials

BEST SELLER

Perfect Precision For Complex Impressions

With an ideal combination of flowability and stability, PERFIT Heavy Body and Light Body can remain at the application site. They are the perfect material for implant impressions and full denture impressions

Excellent hydrophilicity and thixotropy

PERFIT impression material is highly hydrophilic. It has an excellent ability to flow in wet areas and accurately reproduce details. Excellent thixotropy ensures that the material does not easily drip from the teeth. It brings a comfortable experience to patients.

Excellent dimensional stability

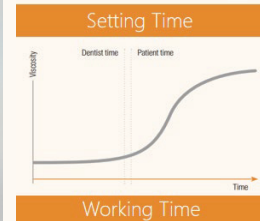

PERFIT impression materials have a low volume shrinkage and excellent dimensional stability. This dimensional stability ensures that the impression shape can be preserved for 28 days, which is convenient for dentists and laboratory technicians.

Snap-Set™ Technology

PERFIT provides faster curing efficiency. It has sufficient working time and shorter intraoral setting time, which not only facilitates the clinical operation of dentists, but also brings a comfortable clinical experience to patients. And the faster cross-linking time reduces the inaccuracy caused by micro-movement.

Coordinated handling properties

Due to its excellent elastic memory, the material can be easily removed from the mouth and returns to nearly its original shape after removal. PERFIT products are available in various hardness levels, giving dentists multiple options to help them achieve the desired impression.

Clear details and high precision

No Bubbles

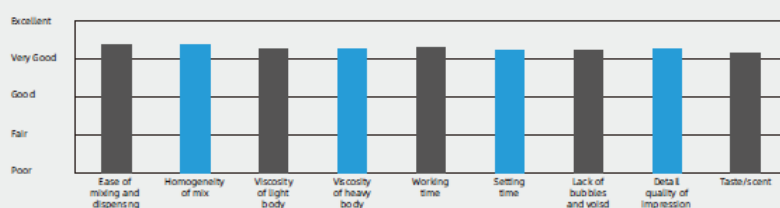

Continuity of the gingival margin

Clinical evaluation and feedback

Evaluation Summary:

"Great detail and handling. Excellent hydrophilic property."

"The ease of loading and consistency of this impression material are very good."

"Very clean impressions, less bubbles."

—Comments from Dental Advisor Evaluators

I've used this material for 6 months, it's easy mix and accurate dosing of the base and catalyst due to their homogeneous no taste and smell. I like the density of the material too, there were no pores.
— Dr. Hanna Zielinska

I'm very satisfied with the material, especially the high hydrophilicity and excellent adhesion between layers. One impression can be cast several models and still has good resistance to deformation.
— Dr. Andrey Zakharenko

PERFIT Regular Body - Transparent Elastometric Impression Material

For Clinical Applications

- Two-Step impression technique with wash materials
- Light curing guide for
 - Mock up restoration
 - Bonding of orthodontic brackets
 - Occlusal stamp for composite restoration

Pack Includes 2 x 50ml Cartridges + 6 Mixing Tips
HUGE-IMP10

\$49.50

Clinical Application Case

The matrix created with PERFIT Regular Body achieves excellent aesthetics. In a short period of time, it can simplify clinical procedures and increase operational efficiency.

For Lab Applications

Composite injection moulding technique

Extreme Transparency

No Bubbles

Ideal Rigidity

High Aesthetic Results

1. Prepare the teeth and make the plaster model.

2. Finish restoration with wax on plaster model

3. Apply Regular Body to the plaster model

4. Use Regular Body to make the transparent matrix

5. Fill the space with light-curing resins

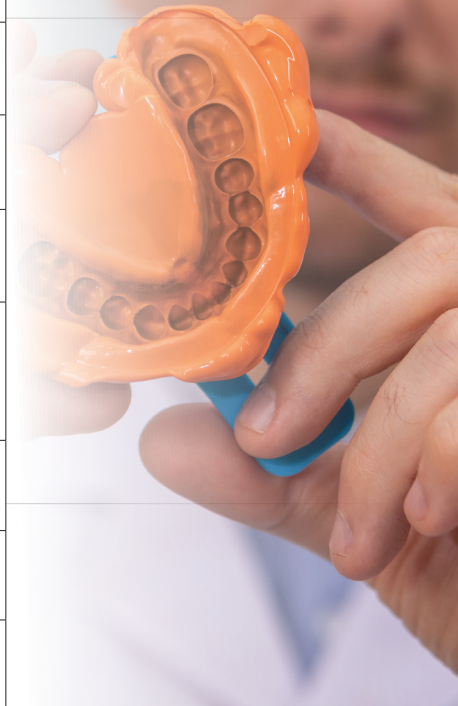

6. Light cure the resin materials

7. Finish restoration after polishing

PERFIT Bite Registration

Scannable Bite Registration Material

PERFIT Bite Registration is an addition silicone, which can be used for conventional bite registration techniques in conjunction with indirect restorative procedures. It is also a scannable material that can be used for the optical recording of data when fabricating restorations with CAD/CAM systems.

High Final Hardness

Due to the material's high final hardness of **90 Shore A** and high fracture toughness, PERFIT A Silicone for Bite Registration is easy to trim and grind. The high final hardness is particularly important for repositioning the bite registration between the models in the articulator. This is the only way to ensure perfect-fit restorations.

Fast Setting Time

The intraoral setting time of the fast type is 45 seconds. It provides patients with a pleasant impression recording experience, improves acceptance rate, and thus reduces the risk of inaccuracy. At the same time, it provides ample working time for full-mouth bite recording.

Scannable

PERFIT Bite Registration is a scannable bite registration material that is suitable for both universal bite registration and powder-free optical data recording of the antagonists for CAD/CAM technology, e.g. for fabrication of all-ceramic restorations.

Whipped-cream-like Consistency

The consistency similar to fresh cream makes it easy for patients to bite. It is not easy to flow and has a certain bite resistance, which brings a good clinical experience to patients.
